

GOSECURE TITAN[®] VULNERABILITY MANAGEMENT AS A SERVICE

Keep operating systems and applications updated and in compliance with GoSecure Titan Vulnerability Management as a Service (VMaaS).

MAINTAIN YOUR DEFENSES

As the complexity of systems and applications increases, so do the opportunities for attackers to exploit vulnerabilities. Because a majority of breaches are due to unapplied patches, keeping patches and upgrades up to date can work to protect organizations against breaches and help meet compliance requirements.

GoSecure Titan[®] Vulnerability Management as a Service (VMaaS) delivers complete solution options for organizations to keep systems and applications updated and in compliance— with managed support available to remediate issues and improve security posture. GoSecure Titan VMaaS will:

Identify Applications
& Assets

Prioritize
Threats

Respond with
Updates

CHALLENGE	SOLUTION
Visibility and control over systems and applications across a diverse technology environment.	GoSecure Titan VMaaS delivers comprehensive patch management for operating systems and applications, real-time monitoring and compliance reporting— with a client dashboard to monitor status and deployments.
Allocating the resources to patch fast enough to keep up with today's emerging threats, while ensuring a QC of the updates deployed.	GoSecure Titan VMaaS will identify and deploy needed patches to all systems and applications under contract. All updates are tested through a rigorous quality assurance process prior to deployment, taking the burden off the internal team.
Alert fatigue and lack of visibility.	GoSecure professionals provide continuous scanning and remediation support as an extension of the in-house team—using risk-based prioritization—for those clients who elect managed services within GoSecure Titan VMaaS.
Understanding if systems and applications meet compliance standards.	GoSecure Titan VMaaS offers comprehensive reporting on status of patches and scans for systems and applications.

FOR YOUR VAST TECHNOLOGY NEEDS

Organizations have increased their focus to protect against breaches due to the growing number of vulnerabilities, but the complex landscape of user applications, devices and operating systems creates further challenges to deliver a standard patch management strategy.

GoSecure Titan Vulnerability Management as a Service (VMaaS) helps achieve continuous control, protection and compliance across a complex terrain of technologies so patching is no longer a burden.

GoSecure Titan VMaaS supports:

- Operating Systems: Microsoft Windows, OSX, RedHat, Centos, Ubuntu
- Applications: Microsoft Office, Adobe Reader & Flash, Java, Firefox, Chrome, GoToMeeting and Cisco WebEx
- Other third-party application support can be requested

GOSECURE TITAN VULNERABILITY MANAGEMENT AS A SERVICE (VMAAS) OFFERS FLEXIBLE PACKAGES

GoSecure Titan VMaaS is a flexible offering designed to give organizations the right level of protection for their needs. Our options include scanning, patch management or full-service deployment across covered systems and applications.

ABOUT GOSECURE

GoSecure is a recognized cybersecurity leader and innovator, pioneering the integration of endpoint, network, and email threat detection into a single Managed Detection and Response service. The GoSecure Titan platform delivers predictive multi-vector detection, prevention, and response to counter modern cyber threats. GoSecure Titan MDR offers a detection to mitigation speed of less than 15 minutes, delivering rapid response and active mitigation services that directly touch the customers' network and endpoints. For over 10 years, GoSecure has been helping customers better understand their security gaps and improve their organizational risk and security maturity through MDR and Advisory Services solutions delivered by one of the most trusted and skilled teams in the industry.
